

Work Safe Today,

Play Safe Tomorrow.

## ▲ The forgotten sharps injury

Scalpel injuries are 200 times more likely to occur than needlestick injuries. They are particularly common in surgical settings. Regrettably, many users and clinical administrators have underestimated the likelihood of these injuries.

Scalpel cuts can happen to anyone, including you, no matter how experienced you are in handling scalpels. These cuts can result in infections, blood-borne diseases and psychological distress. Other serious injuries could require microsurgery to repair digital arteries, nerves and tendons. Many such scalpel injuries can be prevented using the Qlicksmart BladeFLASK, the world's pioneering single-handed blade remover.

## ▲ The award-winning blade remover

The Qlicksmart BladeFLASKs have safely removed over 70 million contaminated scalpel blades, and prevented up to 150,000 injuries around the world.

BladeFLASK is simple to use with a quick "push, click, and pull" action to remove and contain used scalpel blades.

This easy-to-use solution provides a lower cost alternative to safety scalpels.

Used together with a hands-free passing technique, the BladeFLASK can prevent up to 5 times more injuries than a safety scalpel.

BladeFLASK allows all scalpel blade users to maintain their preferences for the standard metal handles.

BladeFLASK has won multiple awards, which demonstrate its practicality and effectiveness in reducing scalpel injuries.

Workplace safety is the right of all healthcare workers, and the responsibility of all employers.

Use the Qlicksmart BladeFLASK and be safe.

# ■ Specifications

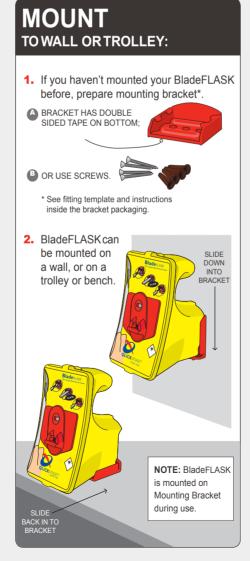

0-1	Ded feeling
Colour versions	Red - for USA
	Yellow - for all other countries
Product code	QFRGEN - red version
	QFYGEN - yellow version
GMDN code	46235
