Update on DNA

Introduction – His Honour Judge Tompkins 1
Getting to grips with DNA: a basic metaphor 4
1. The basic science of DNA – Simon Walsh 6
Introduction 6
Fundamental human anatomy 6
Fundamental genetics 8
Fundamental molecular biology 10
The structure and sequence of DNA 11
Variation on the DNA molecule 13
Ability of DNA to replicate – in vivo 14
Ability of DNA to replicate – in vitro 16
DNA profiling in forensic science 18
How it happens in the laboratory 25
Statistical methodology – frequentist approach 28
Statistical methodology – Bayesian approach 29
DNA interpretation – New Zealand context 31
DNA statistics – some common misrepresentations 33
2. DNA in the courts – His Honour Judge Tompkins 37
DNA and the criminal law 37
The United States of America 37
England 40
Australia 42
New Zealand 44
The Criminal Investigations (Blood Samples) Act 1995 48
The destruction of samples 51
3. Practical applications – Murray Gibson 55
An elementary introduction to DNA 55
Prosecution presentation of evidence 56
Defence challenge to DNA 57
Collection, carriage and custody of the crime scene samples 58
Reporting 62
Interpreting DNA results 63
Statistics 64
Cross-examination checklist 66
4. The Future 68
Post-conviction exoneration - His Honour Judge Tompkins **68**
Post-conviction exoneration by DNA 71
A structure for dealing with requests for post-conviction relief 76
The role of defence counsel 77

The role of prosecutors 78
A case for review – Murray Gibson **80**
Discovery – the prosecutor's burden 81
Articles 83
New technologies and future directions - Simon Walsh **85**
New technologies 87
Glossary 88
