**Crown Plastic Tent Pegs**

Top quality **New Zealand made** plastic products to anchor your tent for a hassle free camping experience.

Only available in New Zealand from Rolux Fishing Rods. For bulk orders, please email me your requirements at [rolux@xtra.co.nz](mailto:rolux@xtra.co.nz)

**Superior to ABS Pegs**

Since 1981, we have produced a range of **superior plastic tent pegs, rope slides and keyhole tensioners** for camping, under the "**Crown**" brand. The tent pegs were designed specifically with New Zealand conditions in mind and are moulded in **High Impact Co-polymer Polypropylene**. This Particular engineering plastic is extremely resilient and can be used in all different soil types. It

has the ability to bend around stones in stoney soil and **retain its integrity** (lesser ABS pegs can break when they hit a rock). If removed from stoney soil, the pegs may have a slight bend in them, but the careful choice of the thermoplastic moulding material allows for straightening of the pegs by insertion in boiling water and manually removing the bend from them.

These are the **best plastic pegs on the market** for holding power, strength, ease of use and longevity.

"**Crown**" tent pegs come in **3 different sizes**. They can be used for securing light tents, fly's and tent floors up to and including large multi-room family tents, Gazebos, sports nets and wind breaks.

**15 cm Peg**

The smaller peg is **15cm long** and is made with double hooks on the top and is ideal for light duty anchoring. The double taper makes for easy insertion and removal with the main holding power being obtained by the shape & angle of insertion.

The **15cm** plastic tent peg has been designed with a **double hook** system so that it can easily be used to either anchor down a tent floor or ground sheet with the straight hook or act as a strainer for guy ropes with the curved hook side.

**Above left:** 15cm peg & guy rope using curved hook.

**Above right:** pegged down groundsheet with 15cm peg using straight hook.

## 23 cm Peg

The **middle size peg is 23cm long** and is the most popular one that we sell. Used for all tent sizes, it is a very versatile peg with superb strength and holding power. The 3 sided shape allows easy insertion with the maximum surface area in contact with the ground, providing a superior tent peg with great holding ability.

Both the **23cm & 30cm** pegs have a **single hook** on top and also a hole for inserting a hooked peg removing tool to ease removal from the ground without damaging the peg.

If you do not have a hook removal tool, it is easy to remove these pegs by using the attached guy rope to pull the peg straight out of the ground. See the pictures below:

Peg removal using the guy rope. Pull on the same angle as the peg is inserted for easy removal.

## 30 cm Peg

The largest peg we supply is 30cm long and of the same design as the 23cm version. Once this peg is anchored in the ground, it can easily resist the tension applied by even the largest of family tents. It is often used for securing large wind breaks and for tensioning ropes for many different purposes. As far as recreational camping goes, you will never be let down by our largest peg.

## “Crown” Plastic Rope Slides

6.5cm slide

10cm slide

To complement the range of pegs, we also have “**Crown**” moulded rope slides in two sizes which are easy and economical to use. These are **6.5 cm** and **10 cm** long with holes in both ends for attaching the guy ropes.

A photo of the 30cm tent peg and the 10cm rope slide in action.

In this photo, the peg is not inserted fully so as to show both products in use. The peg would normally be inserted fully into the ground.

## “Crown” Keyhole Tensioners

“**Crown**” moulded **keyhole tensioners** are made from Thermoplastic Rubber (TPR) and provide another option when erecting tents, shades or fly's etc. They easily stretch and have an excellent memory. **Standard Colour is black.**

The keyhole tensioners are placed between the peg and the guy rope to act as a shock absorber to prevent damage to the tent material if it is over strained as in a heavy wind or even someone tripping over your guy rope.

“**Crown**” plastic tent pegs, rope slides, and keyhole tensioners can be used to anchor everything from sports nets to wind breaks, gazebos and of course small and large family tents. **They are extremely tough and light weight.**

**Don't be fooled by cheap ABS pegs**, as they will not perform as well as the superior Polypropylene “Crown” varieties.

As these products are moulded from **modern co-polymer engineering plastics**, they are, of course, noncorrosive, light weight, and the **tent pegs**, being made out of High Impact Polypropylene, as well as being able to be straightened if bent, anchor well in a variety of ground types and will

not shatter if they hit a rock while being hammered into the ground. Normally moulded in highly visible **red colour**, they are easily distinguishable from the cheap ABS varieties and are easy to see. They are available in the above 3 different sizes to cater for all your demands.

All “**Crown**” **Rope slides** and **keyhole tensioners** are moulded in **black colour**.

**Proudly made in New Zealand since 1981**

Please feel free to contact me if you have any questions about or wish to order any of the “**Crown**” product range.
